

Paper Prototype II

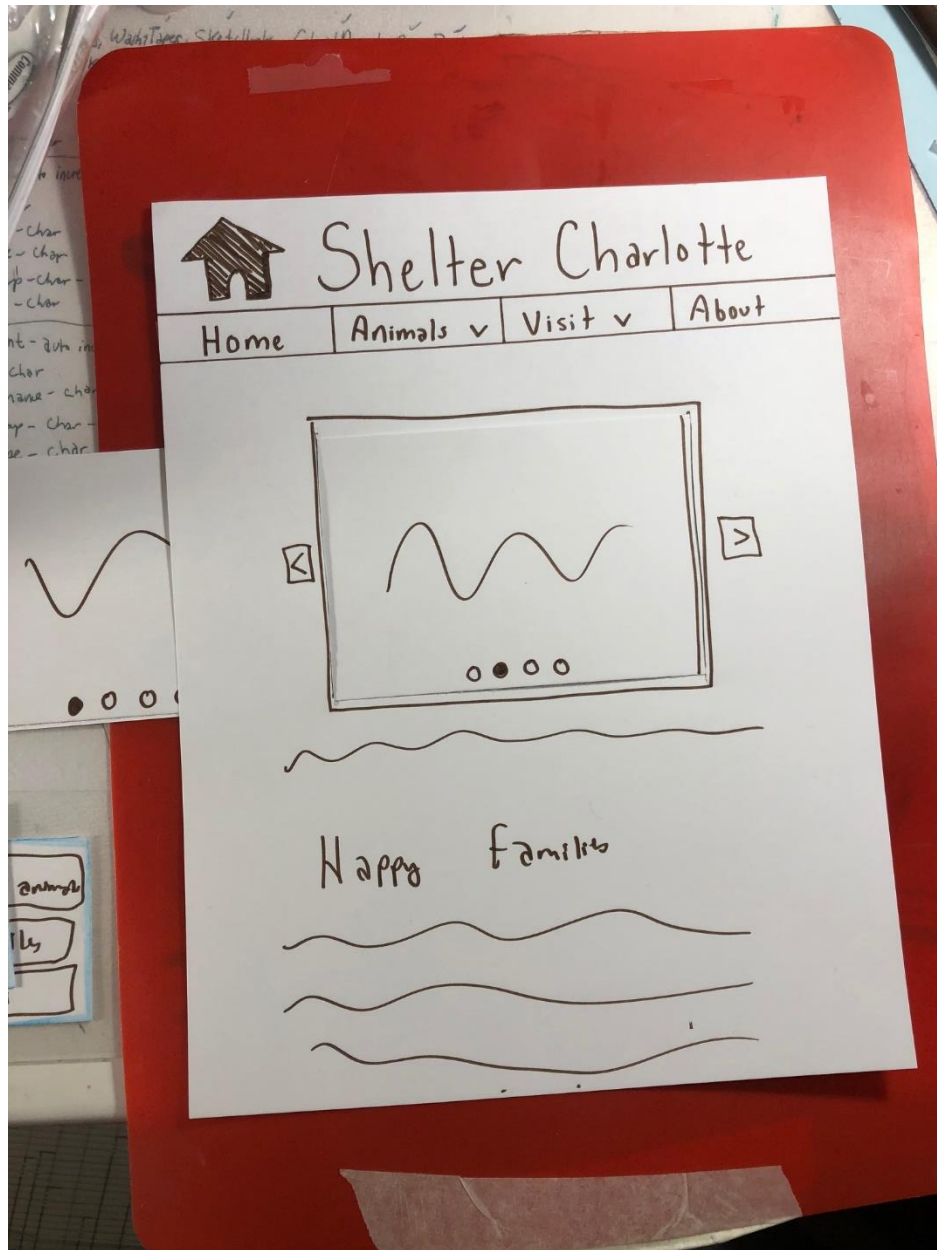

3 interactive elements included: scrollable content, drop down lists, radio button choices

Initial Sketching:

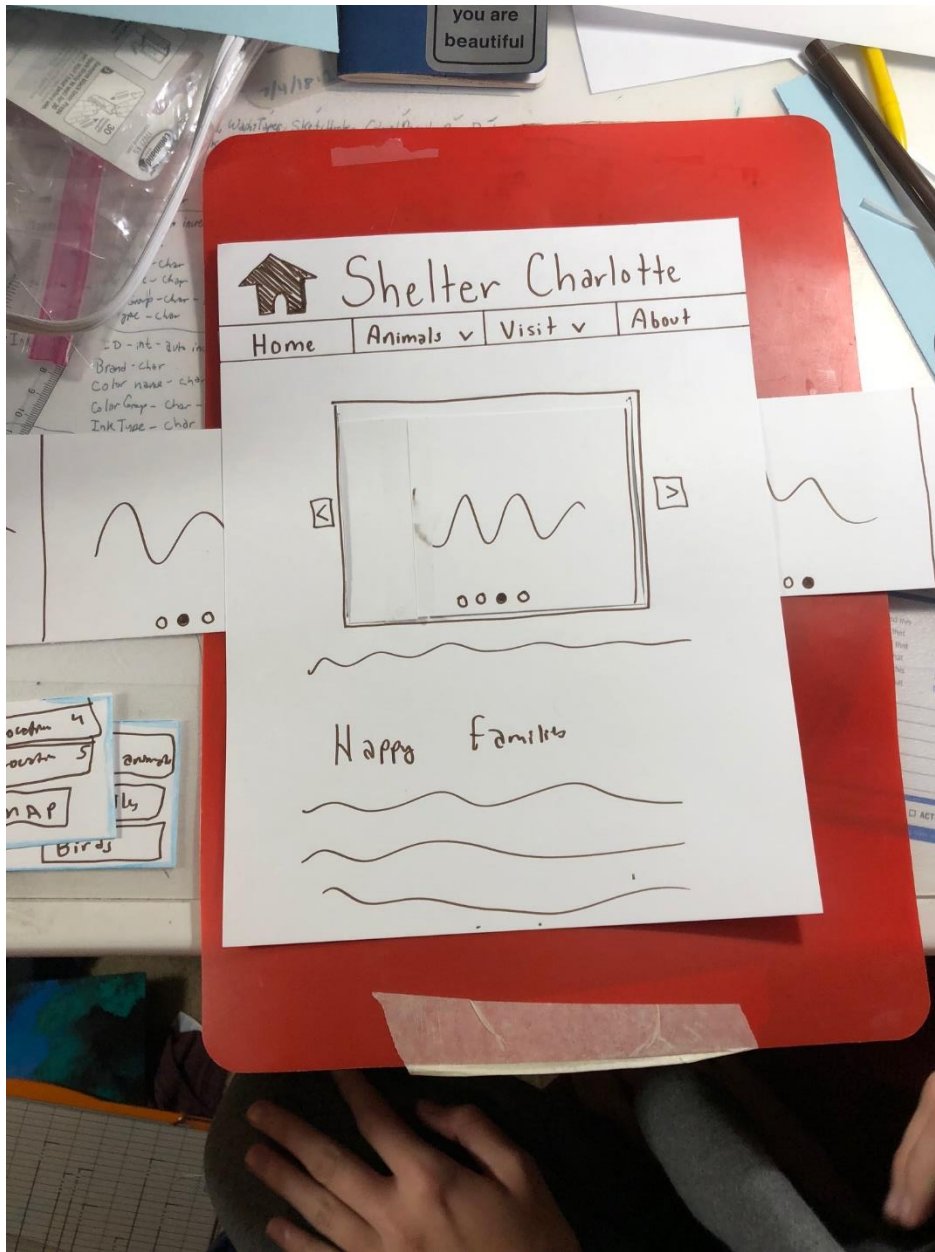

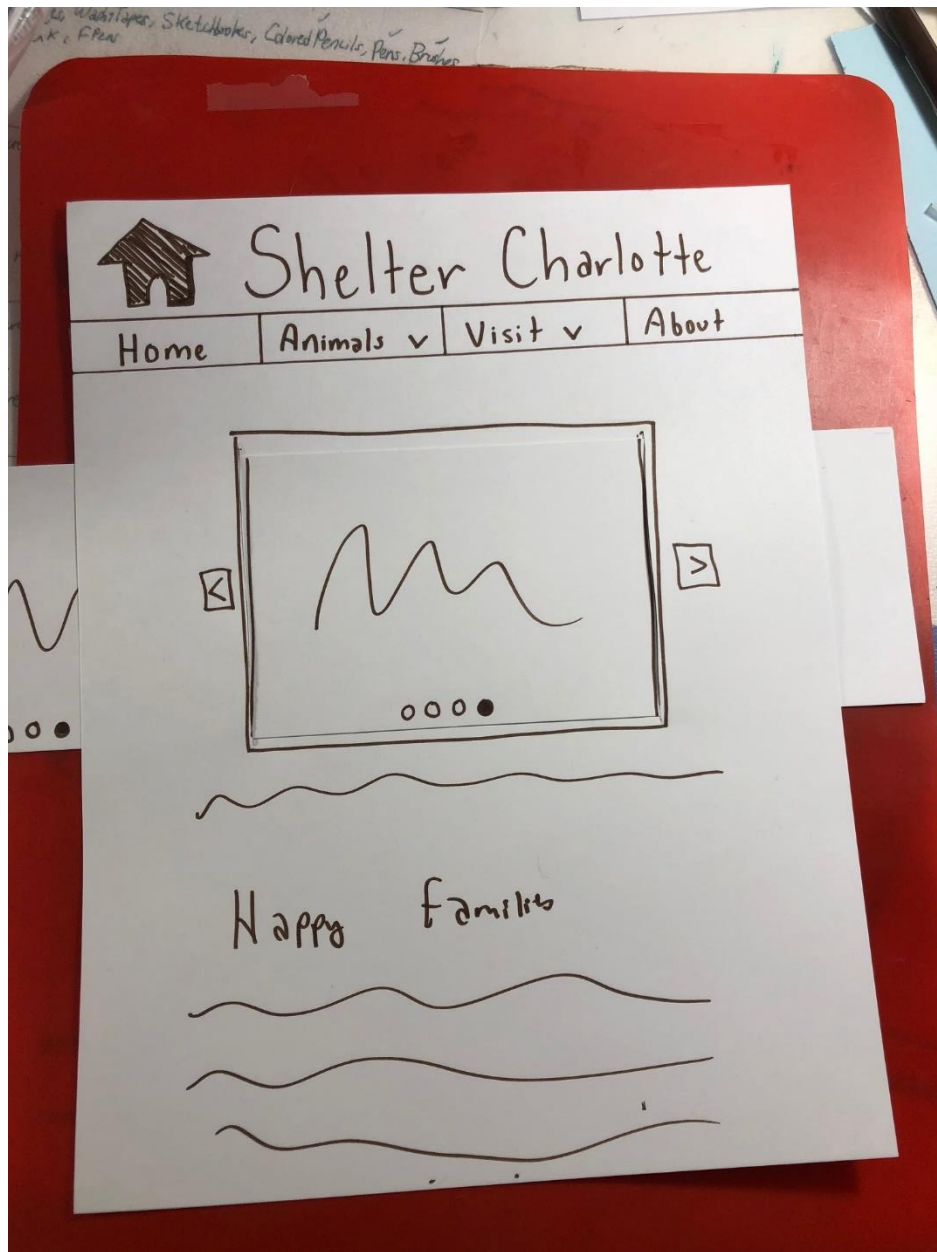

This is the home page the user lands on when they go to the website.

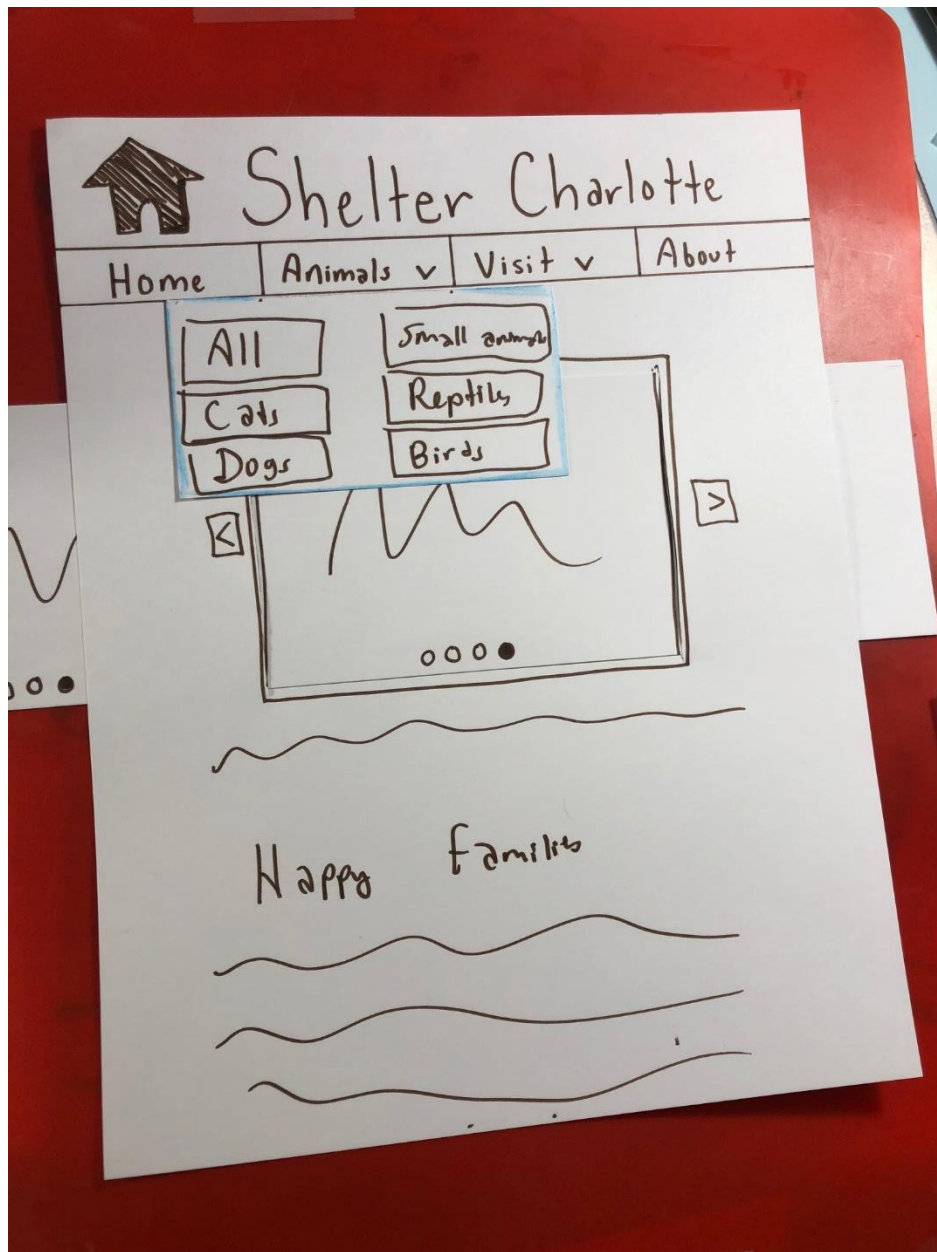

(Paper insert slides to the left) When the user hits the right arrow key, the slideshow slides to show the second image (the paper slideshow slides through cuts in the prototype).

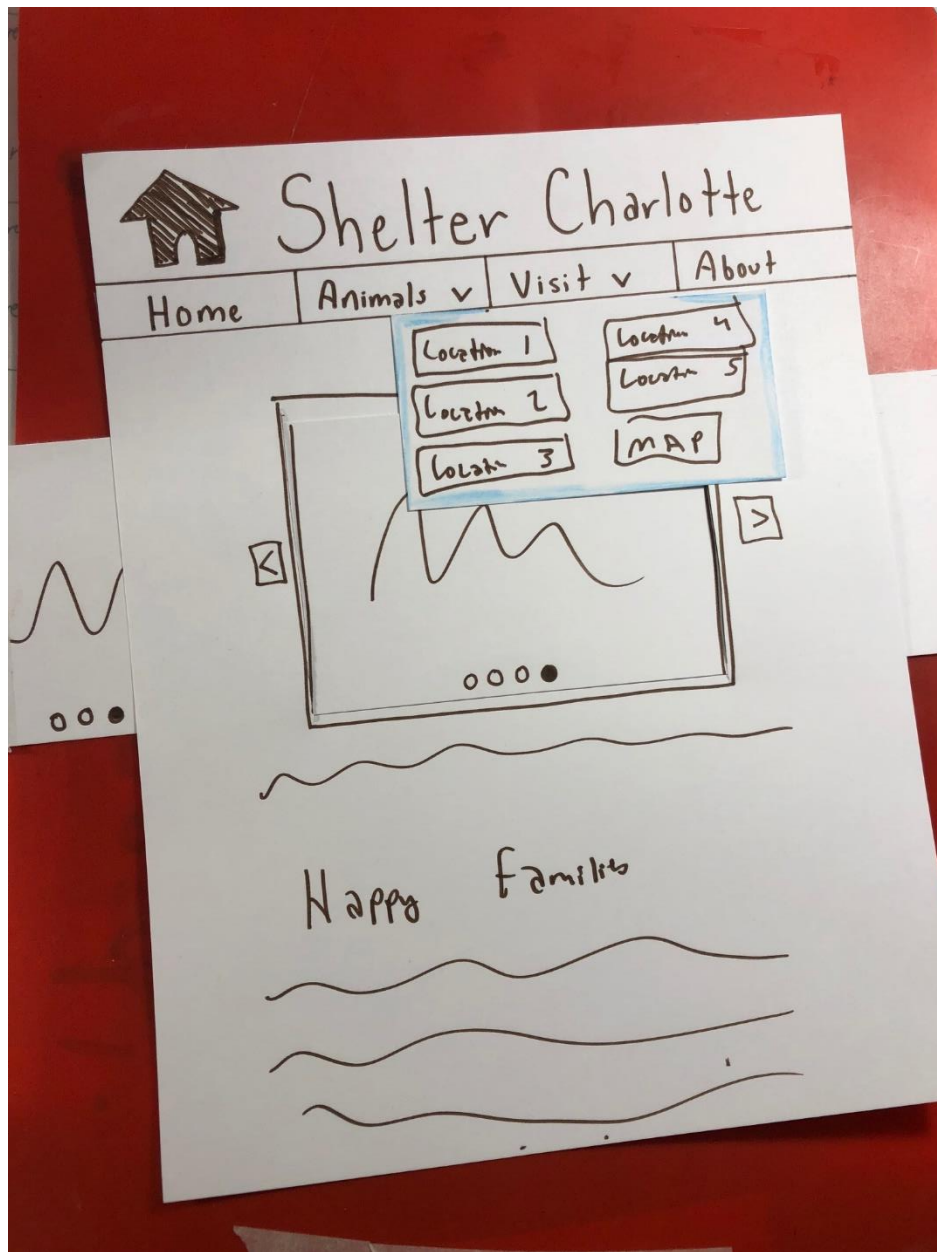

Then pressing again shows the third image (paper slides again).

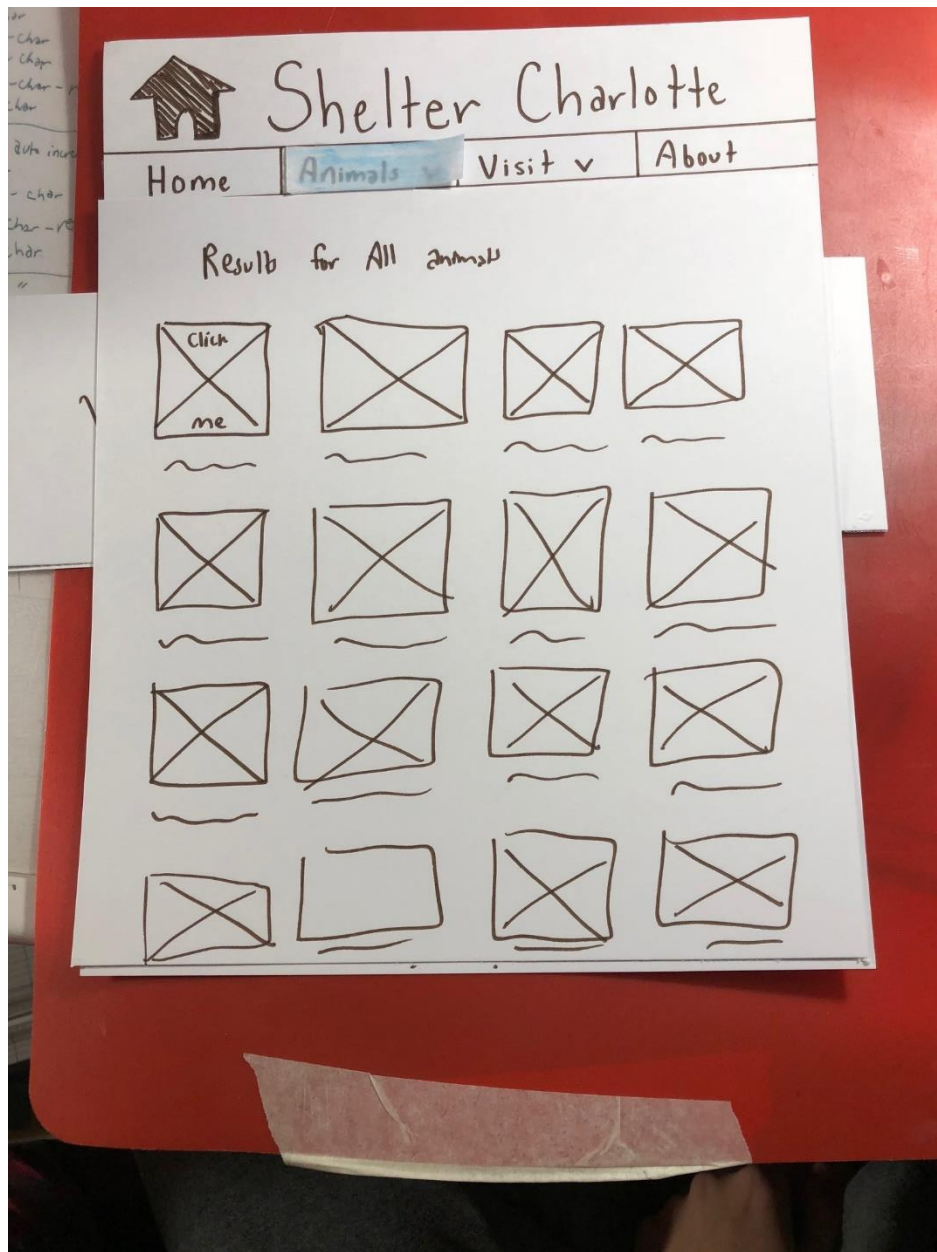

Pressing the right arrow again reveals the last picture.

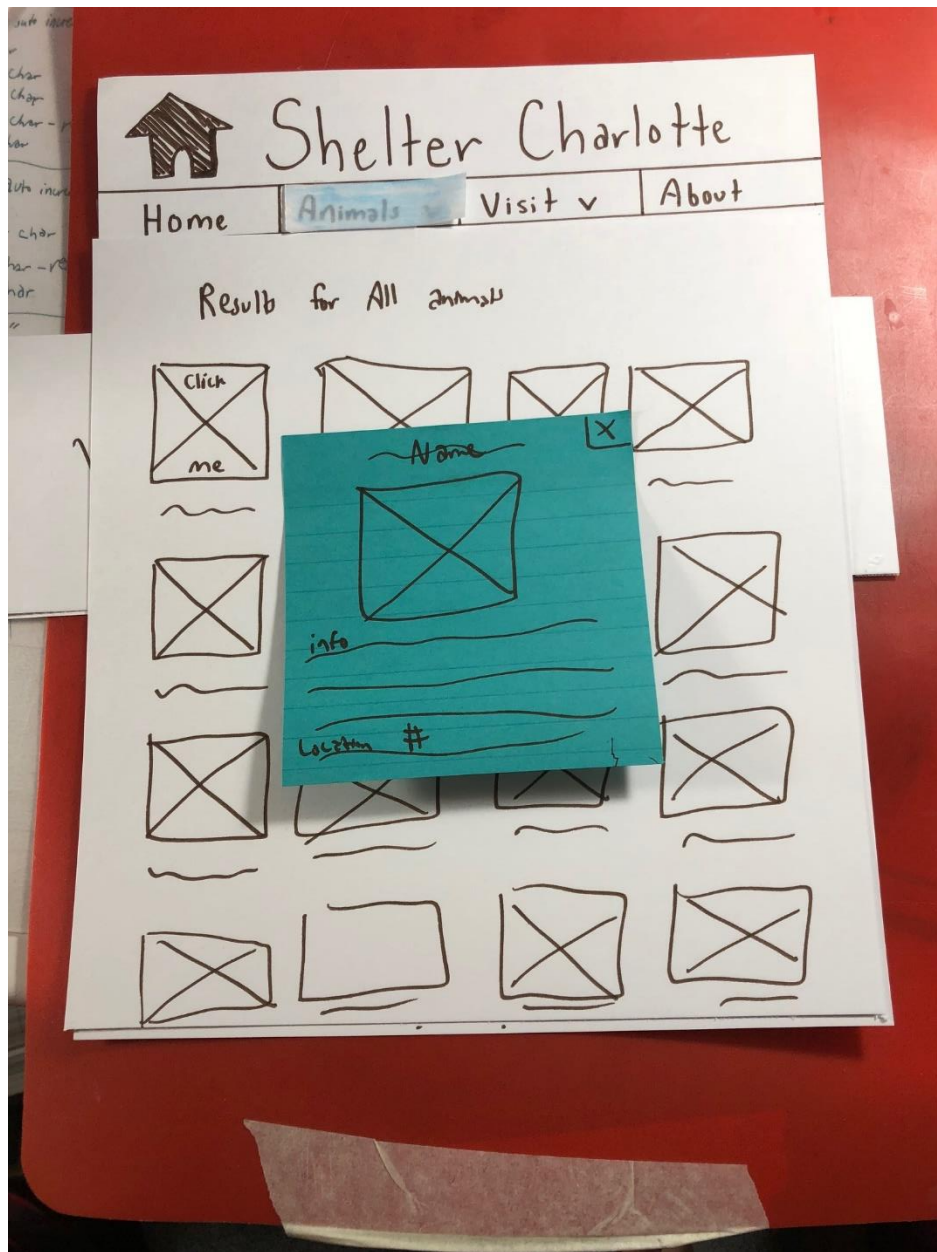

When the user hovers or clicks the animals tab, the dropdown menu appears.

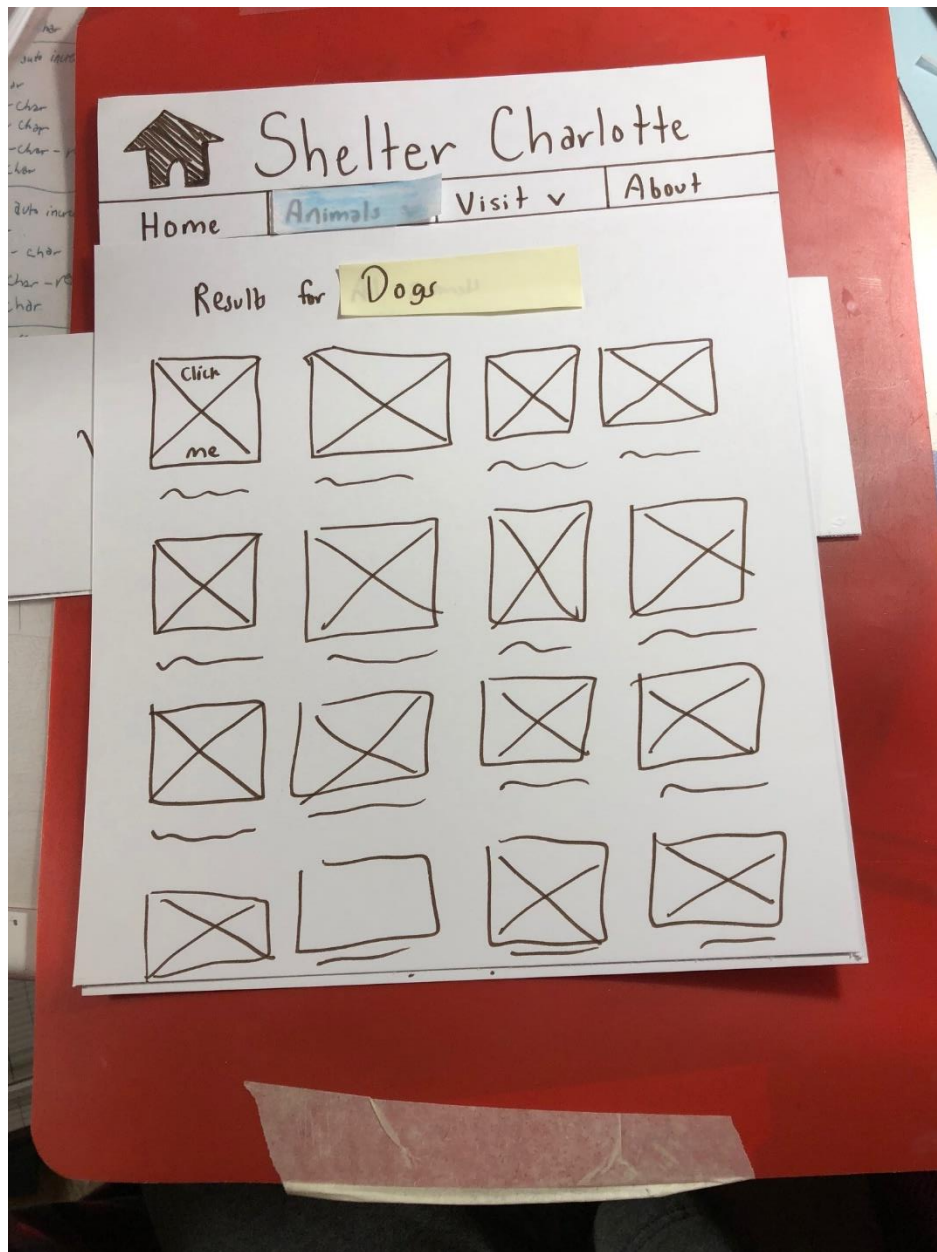

A dropdown menu also appears for the visit tab.

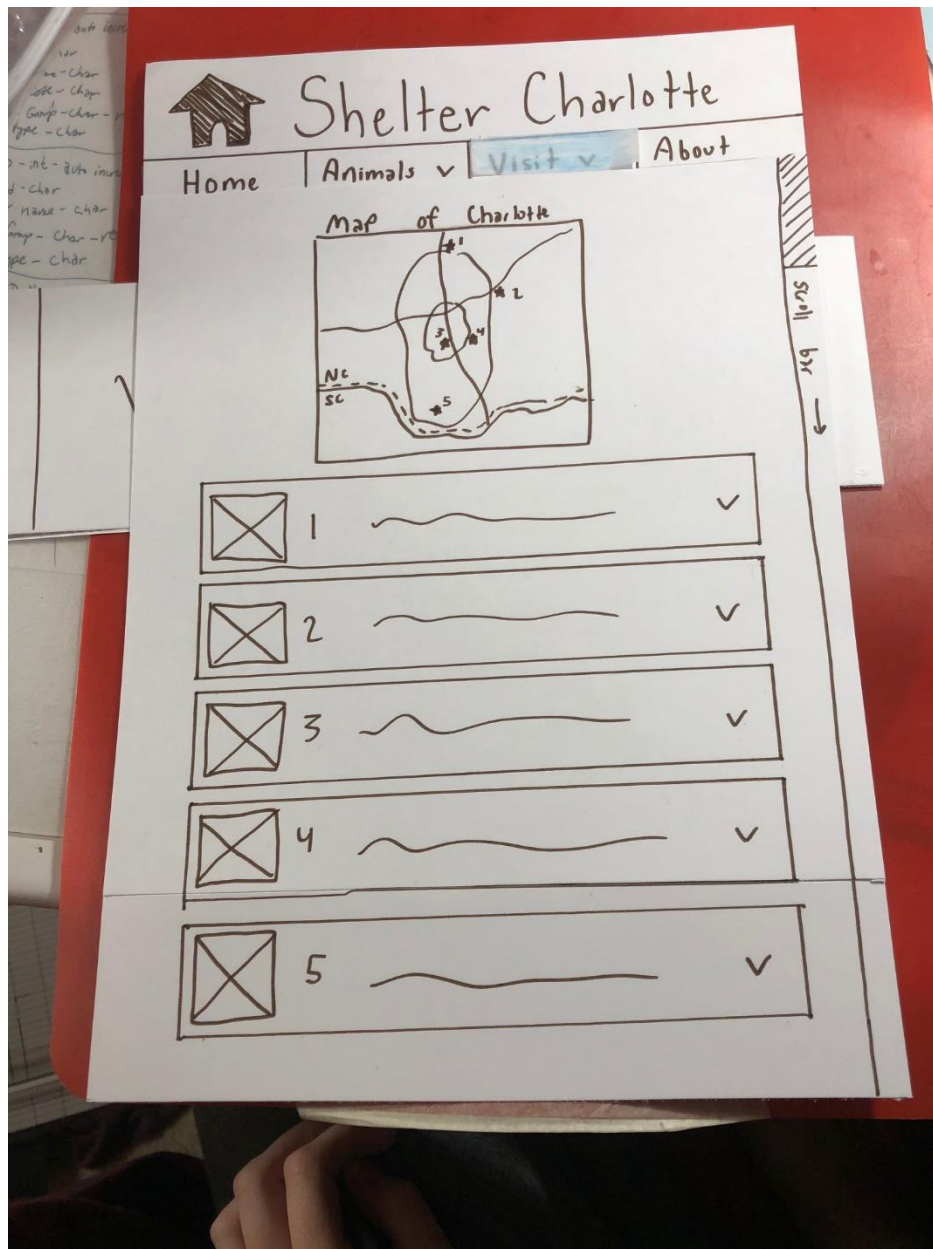

This is the animals page of the website. This is indicated by the blue color on the tab.

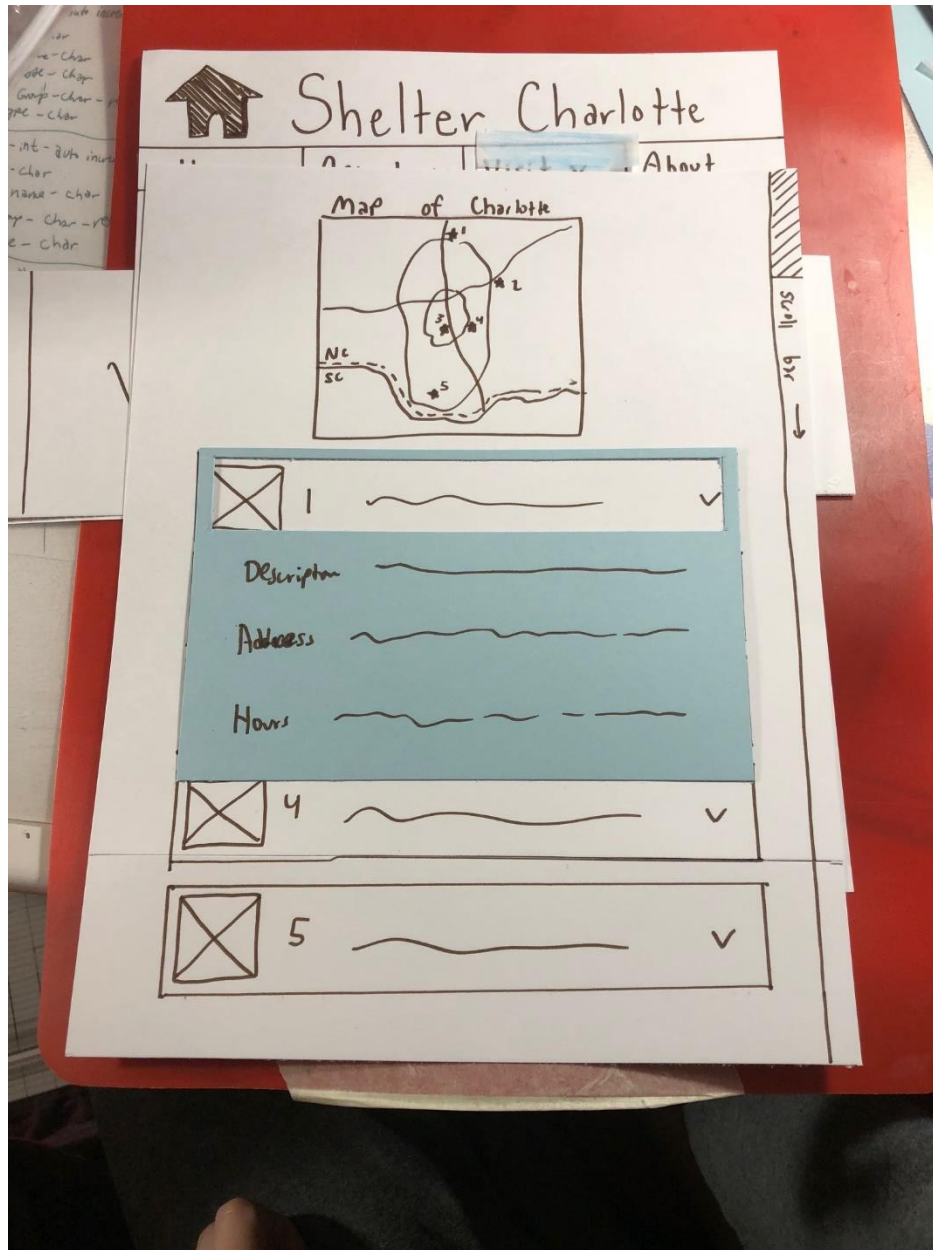

When the user selects an animal, a popup appears with the animal's picture larger and their information and the location the animal is in.

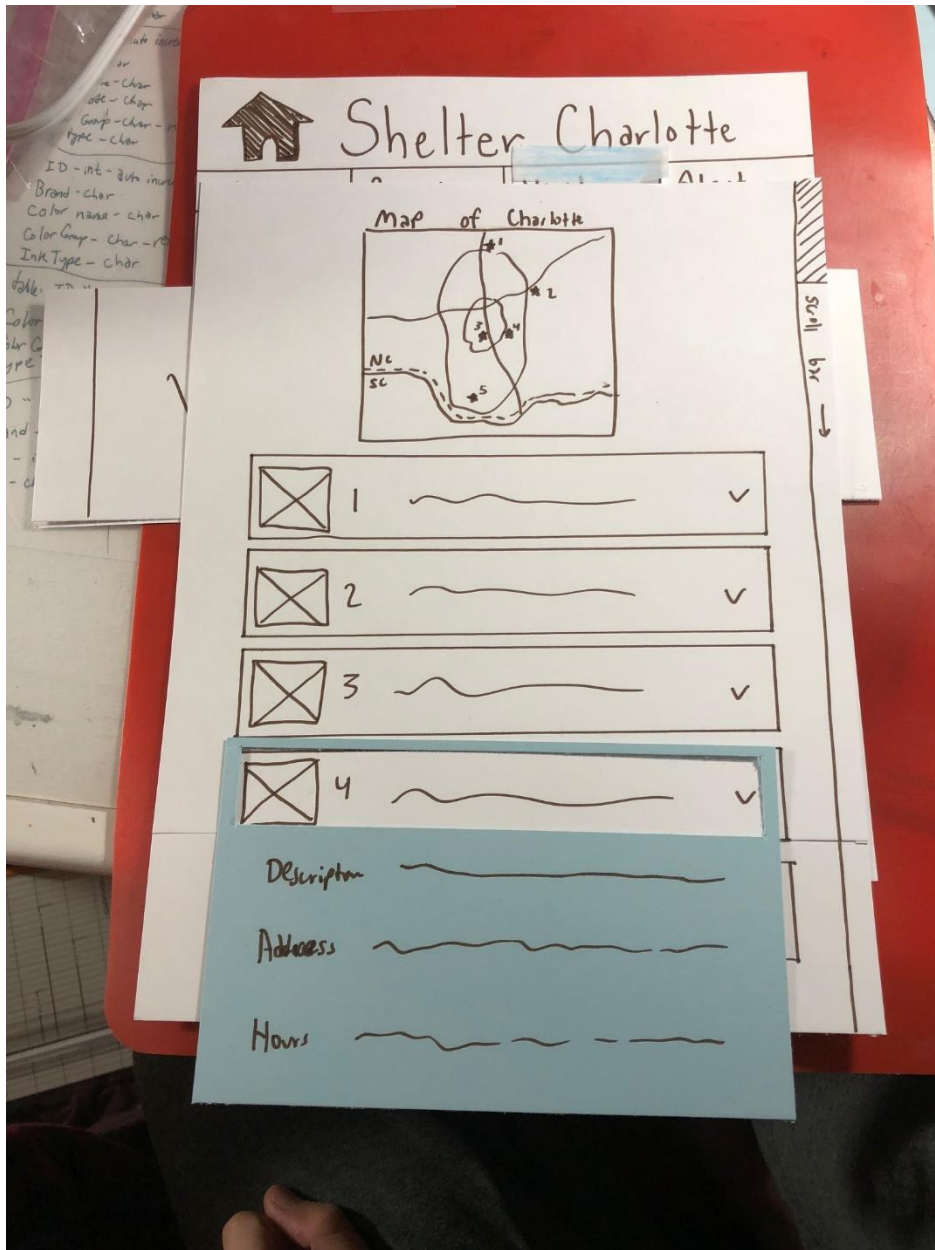

Yellow sticky notes indicate which page the user is on: all, dogs, cats, small animals, reptiles, or birds.

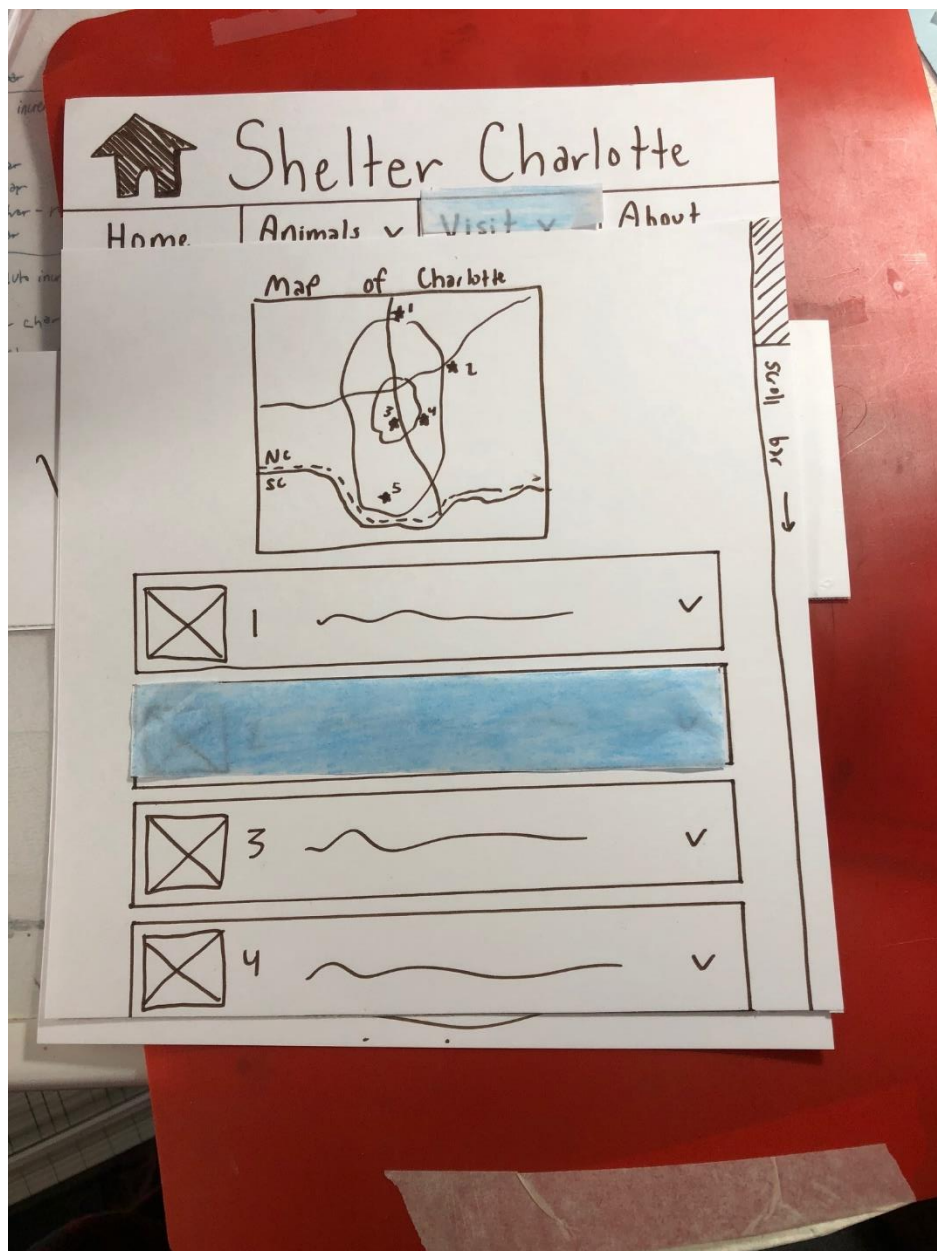

On the visit page there is a foldout so the user can see the whole page since there isn't a real scrollbar.

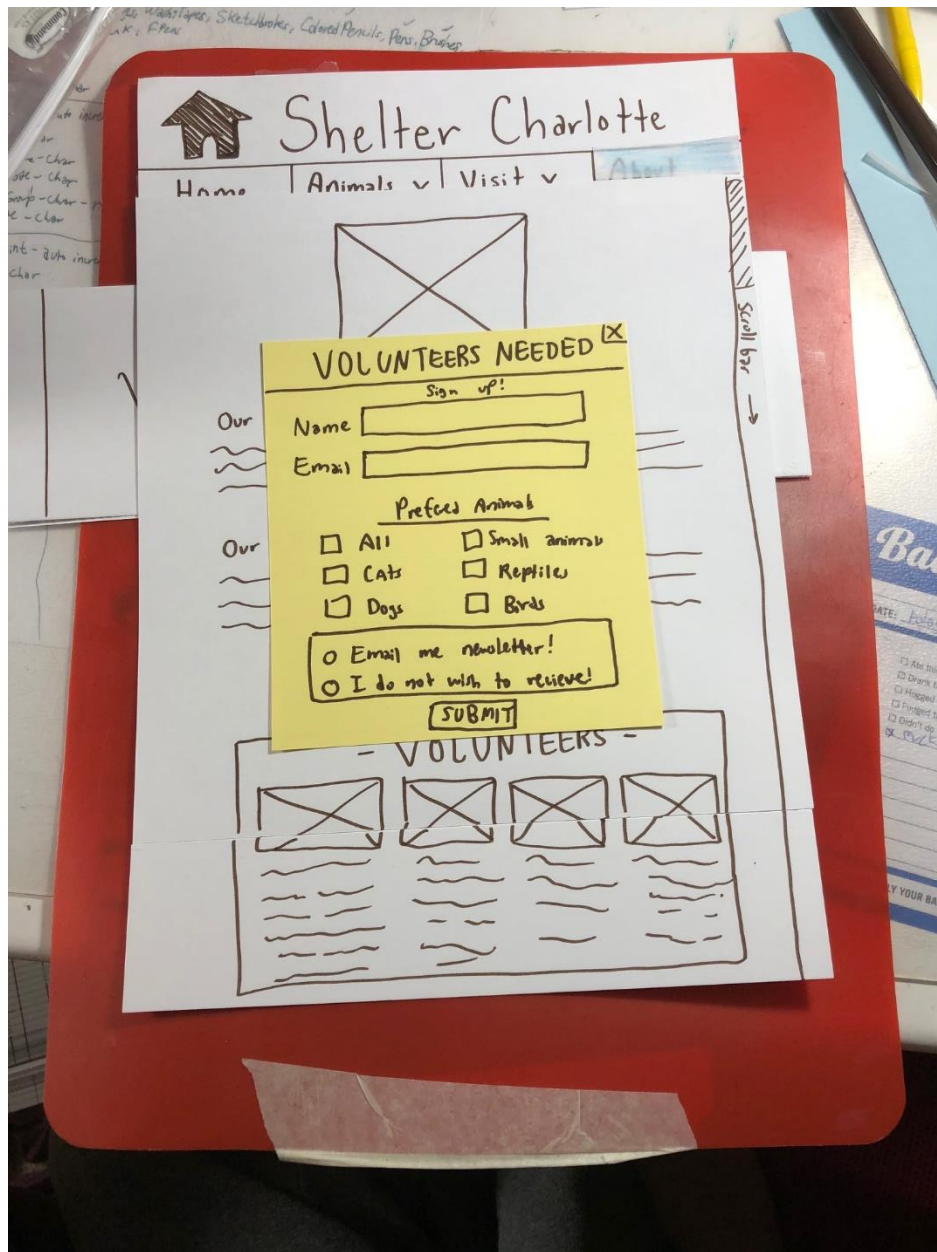

When the user clicks the dropdown arrow of a certain location, the panel drops down and the information is displayed.

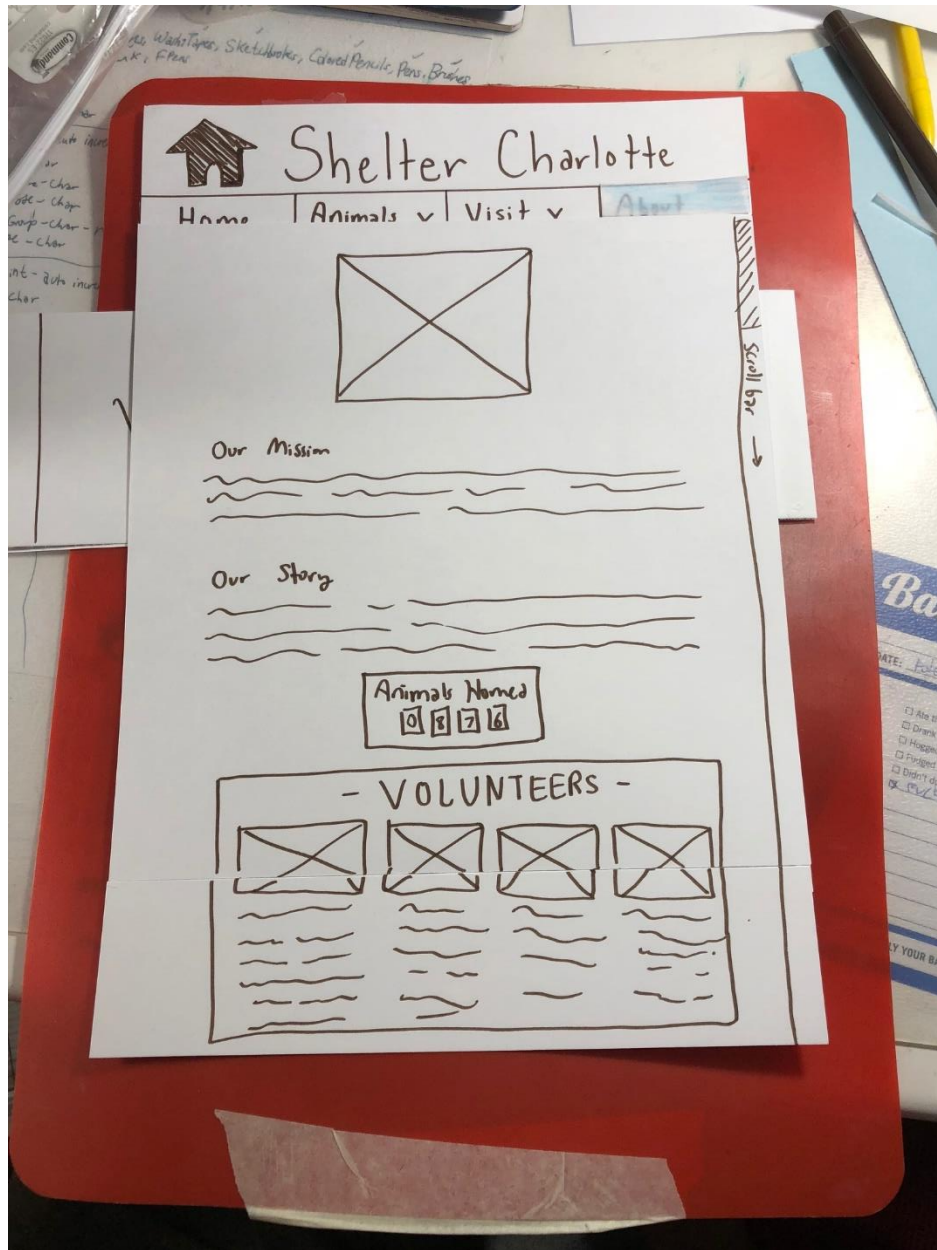

The blue dropdown can be moved to indicate which location the user selected to see information about.

If the user hovers over a location on the map, it will highlight in blue.

Immediately upon visiting the about page, there is a yellow popup that has a volunteer sign up. This form contains radio buttons and checkboxes.

The about page has a foldout to display all the information that would normally be scrolled to.
